

The background is a dark, textured surface featuring faint, light-colored sketches of various scientific and mathematical concepts. These include a globe in the upper left, a large 'V' shape, a microscope on the left side, a stack of books at the bottom left, a cross symbol, an open book with handwritten text at the bottom center, and a percentage sign and other symbols on the bottom right.

# Moral Thinking

PHI 447A

# What will we be doing in “PHI 447A”?

- A Philosophical investigation of Morality
- What is it to do Philosophy?
- What is Morality

# Can you guess what is it to be doing philosophy?

“The philosopher is not a citizen of any community of ideas. That is what makes him into a philosopher.”  
- Wittgenstein

# What is Philosophy?

- Philosophy
  - is interested in general questions;
    - Mathematics, Physics, Chemistry, Biology emerged out of Philosophy
  - deals with questions of central importance;
    - What is there? How do we know? What should we do?
  - works in areas with no agreed upon method
    - Gets messy
    - No easy answers; No trodden path
- “Understand how things, in the broadest possible sense of the term, hang together, in the broadest possible sense of the term” - Sellars
- Working out the right way to think about things

# Morality

- Concerns what we consider to be ‘good’ and right’
- Asks questions such as
  - What makes for a good life?
  - How should you treat others around you?
  - What is nature of morality? Are there moral facts?
- Should businesses hike the prices of their products during times of crisis?
- Should a doctor provide oxygen to a young individual rather than an elderly person if there’s a shortage?
- Is it ethical to lie to a close friend such that I get a job and he doesn’t?

# Aim

- To help you understand some of the main traditions of moral thinking so that you can
  - Recognize moral issues when they arise in your personal and professional lives
  - Develop conceptual resources and thinking skills to decide how you ought to act
  - Deal with your own moral dilemmas better

# Lest we take ourselves too seriously!

Living without philosophy

Living philosophically

# What is Morality?

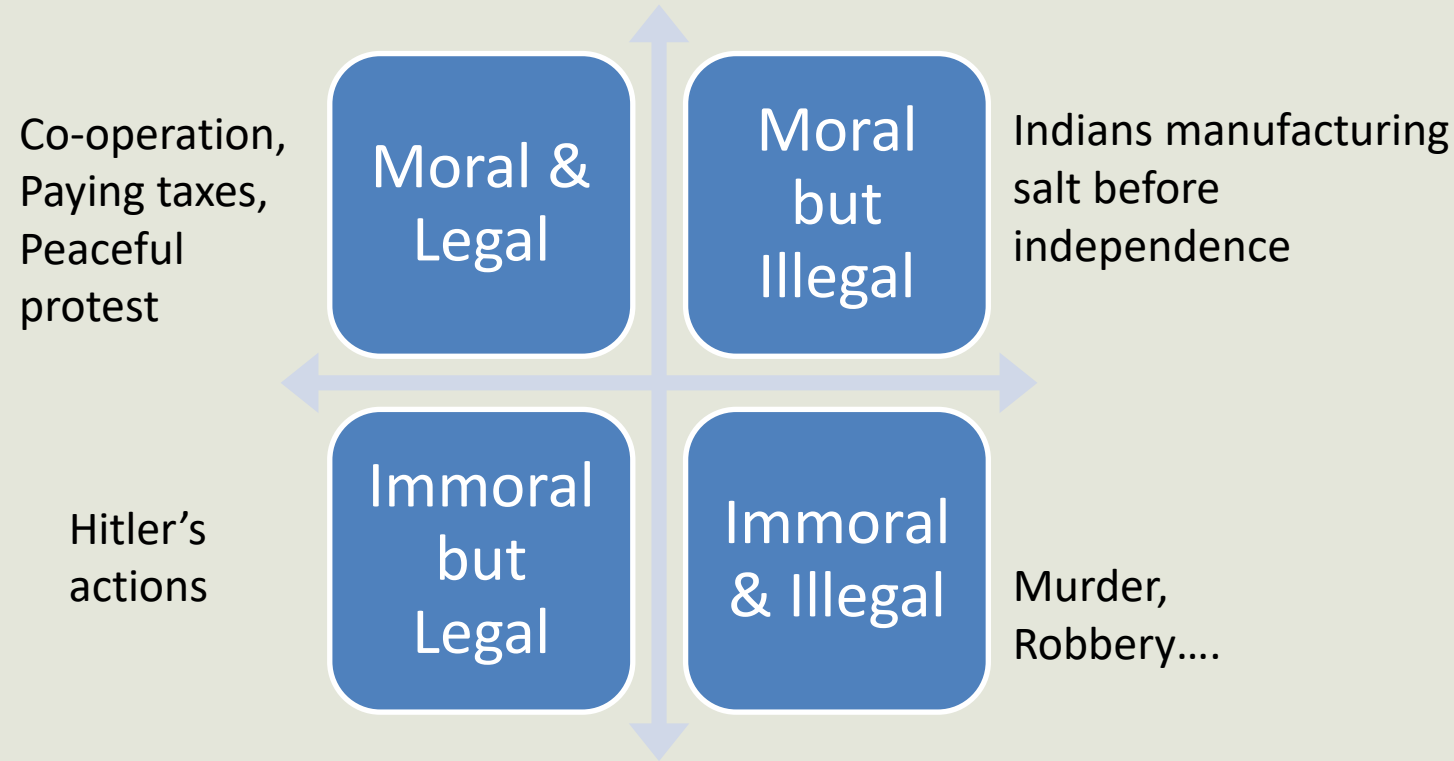

- When we say something is moral/ethical we generally seem to suggest that the act is aligned towards that which is good or that which is right.
- But what is good?
- As an institution, morality seems to enjoy an authority and commands us to do/abstain from certain actions.
- Perhaps it's easier to begin with candidates that come close to commanding such an authority
  - Is morality equal to or derived from
    - Law?
    - Religion?
    - Society?

# Is Morality derived from Law?

- Not all laws are moral
  - Rowlatt Act, Criminal tribes' act 1871 were required by law but we would not consider moral
  - Article 377 in the Indian Penal Code (formerly)
  - The rule, which prohibited women from driving in Saudi Arabia, and which mandates women in Iran to mandatory wearing of Hijab (Headscarf)
- Neither are all moral standards in the form of laws
  - Being courteous to your neighbours isn't required by law
  - Being considerate towards parents, friends isn't required by law
- Law should be based on the firm foundation of morality but often is not.
  - Law = Common minimum morality; Codified morality

# Is Morality derived from Law?...

# Is morality derived from Religion?

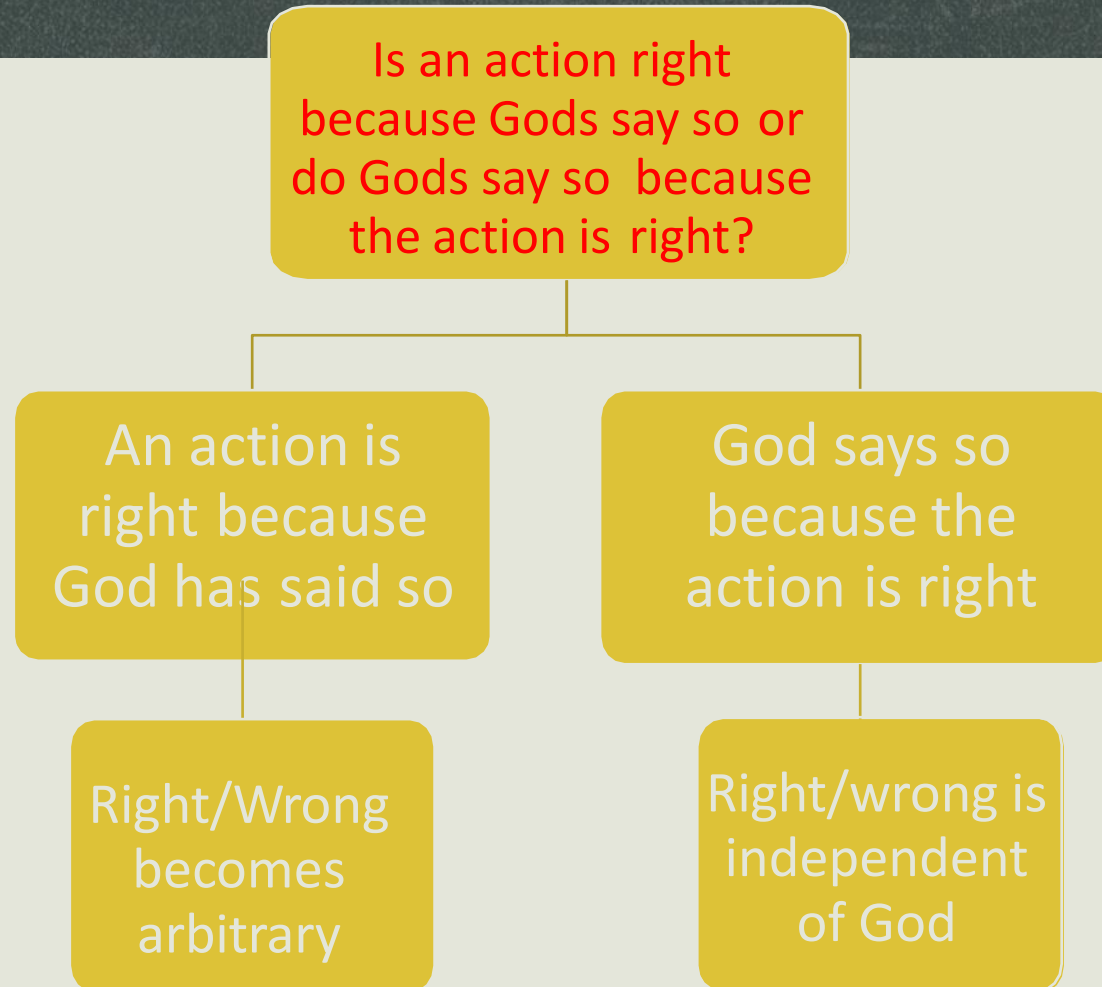

- Divine Command Theory is the view that Morality is derived from religion
  - Religions often spread moral ideas through religious books, customs, and practices.
  - Rules are often taken as a matter of faith (for instance Manusmriti, in the Hinduism, Quran in Islam)
- However, everything, which religions preach might not have an moral framework and thus they are open to scrutiny.
  - Religions too have perpetrated patriarchy, casteism, racism
- Similarly, certain moral prescriptions might not have nothing to do with religious affiliations
  - Empathy, Fairness are values that can be binding on people
- Universal religion? Atheists?

# Challenge to Deriving Morality from Religion

- Euthyphro Dilemma: Is an action right because Gods say so or do Gods say so because the action is right?
  - What is the correlation between right actions and God's commands?
- If right actions come prior to God's saying so, then Divine Command theory might fail in spirit
- If God comes before right actions,
  - How do we explain God's goodness?
  - Any action could be right/wrong
  - How do we explain reasons for God's commands?

# Challenge to Deriving Morality from Religion

# Is Morality derived from Customs?

- Customs are culture-specific, time-specific phenomenon.  
For e.g.
  - ‘Sati’, was accepted custom in the 17th century India, but not in the 21<sup>st</sup> century
- Foundations of morality do not rest on culture
- Morality might require us to deviate from the past in cases where inequality or injustice has been perpetrated at the social and individual level.
- No reform would ever be possible otherwise

# Is Morality derived from Science?

- Moral enquiry is not equivalent to a scientific enquiry.
  - Testing on humans might be scientifically appreciable but not morally
  - Certain aspects of a decision might be morally important but not scientifically
- Neither is a moral dilemma, a scientific dilemma.
- Science focuses on the ‘empirical aspects’
  - explores the question of ‘what is’ but
- Morality explores the possibilities of ‘normative aspects’ of any human social interaction which explores the question of ‘what ought to be’.
- Science doesn’t necessarily capture values

# Is Morality derived from Emotions?

- Emotions have no necessary connection with ethics
  - Emotions and feelings are often response mechanisms
  - Emotions could be unethical and non-ethical as well.
  - E.g. killing some person in anger cannot be explained as an ethical act. Crying at the loss of loved ones cannot be termed as ethical or unethical.
- Hence, emotions cannot set the foundations of the ethics.
- However, ethics can be an indicator through which an individual can regulate, analyze his/ her own emotions, and shape them
  - Similarly, emotions are often indicators of moral/immoral actions

# Lessons from Cognitive Ethology and Developmental Psychology

# Morality as an Evolutionary Adaptation

- What we call morality among humans evolved from animals.
- Apes and other higher vertebrates also display “reactive emotions”: sympathy, loyalty, and some version of altruism.
- The component elements of mature human morality—emerged gradually and piecemeal through many iterations of group selection
  - in response to adaptive pressures inherent in the increasing size and complexity of hominin social groupings.
- Collaboration emerged in response to the need for non-violent means of resolving intra-group conflict
- Cultural software was added to the old bio-cultural hardware
